Intensive Winter Wheat Management - 2019

Shawn Conley, State Soybean and Small Grains Specialist

John Gaska, Senior Outreach Specialist, Adam Roth, Program Manager, and Spyridon Mourtzinis (AgStat) - Agronomy. Damon Smith, Field Crops Plant Pathologist and Brian Mueller, Asst. Researcher - Plant Pathology

The fourth year of a research trial was conducted at the Arlington Agricultural Research Station to assess the impact of various management levels (Table 1) on the yield, grain quality, and disease incidence on 14 soft red winter wheat varieties. Management levels were stair-stepped with increasing intensity of inputs. Each management step increased yield, however growers should verify individual farm gate input prices to see if yield increases had a positive ROI.

Table 1. Management treatments at three levels.

	Management Treatments
